

PORCELAIN CARE

RECOMMENDED CLEANERS

- Wash your sink using warm water, a non-abrasive liquid cleaner or detergent and a soft cloth or non-abrasive woven nylon pad. Your sink may be cleaned as often as it is used.
- For daily cleaning, a warm water soaked sponge with mild soap followed by warm water rinse is recommended. Drying the sink afterwards with a soft cloth or towel will help to eliminate water spots and maintain shine.
- For deeper cleaning needs, a product such as Bar Keeper's Friend or porcelain safe bathroom cleaner is ideal followed by a thorough rinse and soft cloth or towel drying. For a greener clean, try baking soda.
- Always read cleaning product labels to confirm their recommended usage as well as warnings and cautions.
- Note that these recommendations are for the porcelain only and do not refer to the faucet, drain, or other hardware.
- Rinse thoroughly after each use. Most soaps and detergents contain chlorides that are harsh on porcelain. Chlorides are highly water soluble so a thorough rinsing of your sink after each use and weekly cleaning will keep your sink looking bright and shiny.
- Towel dry after each use to prevent mineral deposits from building upon the surface of the sink. Water quality can affect the appearance of your sink. Towel drying and weekly cleaning will prevent discoloration or unsightly film from developing on the finish.
- Read the labels on cleaning products to confirm they are recommended for use on porcelain.
- Harsh chemicals contained in some cleaning products can permanently damage the porcelain.
